

## Tutorial: Price Dynamics in FLBEIA

The tutorial (quarto link) is freely available at the SEAwise Github page of Task 2.2 under [https://github.com/ices-tools-dev/SEAwise\\_T2.2](https://github.com/ices-tools-dev/SEAwise_T2.2), while the development version is maintained at [SEAWISE: Price Dynamics in FLBEIA](#).

The tutorial illustrates the price dynamics included in the FLBEIA model as well as how do the parameterisation of the price dynamics. The aim of this document is to explain how price dynamics can be integrated into simulations using FLBEIA. The code provided in the tutorial is not intended for execution, but rather to illustrate how price functions are parameterized and how they operate within the FLBEIA framework.
